Experience

Company A – City, Region

Month Year – Present

Staff Software Engineer

- Chose [architecture] for [platform] after comparing [options] against [constraint], then migrated [N] teams while meeting [SLO or cost target].
- Designed [shared capability] and led rollout across [N] teams, reducing [integration or delivery time] from [A] to [B].
- Defined [availability SLO] for [critical workflow] and fixed [leading cause of failures], cutting mean recovery time from [A] minutes to [B] minutes over [time window].
- Mentored [N] engineers through [design reviews or incident rotations]; [N] later led [scope] independently.

Company B – City, Region

Month Year – Month Year

Senior Software Engineer

- Designed [service capability] for [N] requests per second, choosing [approach] to meet [p99 latency or availability target] under [constraint].
- Migrated [system] with [rollout method], moving [N] [clients or records] while meeting [SLO]; [reconciliation check] confirmed [result].
- Chose [approach] over [alternative] for [workflow] because [constraint], reducing [latency, cost, or failures] from [A] to [B].
- Addressed [release failure] with [test, feature flag, or canary], reducing failed deployments from [A of N] to [B of N] over [time windows].

Company C – City, Region

Month Year – Month Year

Software Engineer II

- Replaced [manual or synchronous path] with [API, service, or pipeline], processing [N] [requests, records, or events] per [period] within [SLO].
- Traced [bottleneck] to [cause], changed [component], and reduced p95 [latency or runtime] from [A] to [B] at [load].
- Automated [manual workflow], cutting [time or errors] from [A] to [B] and adding [validation or audit control].

Company D – City, Region

Month Year – Month Year

Software Engineer

- Shipped [feature] for [user workflow], handled [edge case], and moved [completion, error, or support measure] from [A] to [B].
- Built [API, job, or integration] processing [N] [requests, records, or events] per [period] with [validation, retry, or idempotency control].
- Fixed [defect class] at [root cause] and added [regression test], reducing repeat failures from [A] to [B].
- Resolved [incident] on call, then added an alert for [failure condition] and a tested runbook, cutting median recovery time from [A] minutes to [B] minutes.

Experience Continued

Company E – City, Region <i>Associate Software Engineer</i>	Month Year – Month Year
- Built [component] with [technology] for [workflow], meeting [specific acceptance or performance requirement]. - Fixed [defect] and added [regression test], reducing [errors or support issues] from [A] to [B]. - Replaced [duplicated or brittle code] in [module] with [shared abstraction], reducing [defects or change time] from [A] to [B].	

Skills

- Languages:** [Language], [Language], [Language].
- Frameworks & Libraries:** [Framework], [Framework], [Library].
- Platforms:** [Cloud], [Runtime], [Database], [Messaging].
- Tooling:** [Testing], [Observability], [CI/CD].

Education

Dalhousie University – Halifax, NS <i>BS Computer Science</i>	January 2019 – December 2022
Teaching Assistant for Server-side Scripting and Web Development.	
Simon Fraser University – Vancouver, BC <i>Computing Science Coursework</i>	May 2018 – December 2019

Certifications

Professional Certification <i>Issuing Organization</i>	Year
Additional Certification <i>Issuing Organization</i>	Year
